GPT

ChatGPT (GPT3.5)

ChatGPT is "an AI language model" made by OpenAI, and is "capable of understanding and processing natural language input in order to provide a variety of services."

Use at: chat.openai.com

GPT4

GPT-4 is a multimodal model, that accepts text and images and can scan a worksheet and output answers to each question. It can read a graph and make calculations based on the presented data.

Use text capabilities with bing chat.

Bing Chat

Bing Chat has GPT-4's text functionality with the added functionality of the web.

Bing Chat will search the web when it is not sure on what to answer.

Use text capabilities with bing chat.

Google Bard

Google Bard

Google Bard is a competitor to ChatGPT that can do the same things as ChatGPT.

The main difference of Bard is that bard can search the web.

Use text capabilities with bing chat.
